

DEPARTMENT OF ENERGY & ENVIRONMENTAL PROTECTION Bureau of Materials Management & Compliance Assurance 79 Elm Street - 4th Floor Hartford, Connecticut 06106-5127

FY2010 MUNICIPAL SOLID WASTE (MSW) RECYCLING DATA FOR CONNECTICUT CITIES & TOWNS – DETAILED REPORT

Notes about the Data Presented Below

Data presented below was updated August 2012 by the Connecticut Department of Energy & Environmental Protection-Bureau of Materials Management & Compliance Assurance – Questions? Please contact <u>Judy Belaval</u> at the DEEP Bureau of MM&CA or call (860) 424-3237.

- **MSW Recycling data** in this report is based on (1) the tonnage of bottles, cans, and paper reported received for recycling from CT municipalities by CT solid waste facilities permitted to process or transfer recyclables, and (2) tonnage of other material reported recycled by CT municipalities (as reported on their FY2010 Annual Municipal Recycling Report). The tonnage of MSW recycled includes both "designated recyclable items" and other MSW recyclable items and also includes material reported reused through municipal swap areas.
- •MSW Disposal data used to calculate recycling rates (% MSW recycled) in this report is based on (1) tonnage of MSW generated within the borders of CT municipalities and reported received for disposal and/or transfer to disposal by CT solid waste transfer stations, resource recovery facilities and landfills and (2) tonnage of MSW reported disposed on the FY2010 Annual Municipal Recycling Reports. It includes MSW generated by both the residential and non-residential sectors. It generally does not include wastes such as construction and demolition wastes, industrial sludges, or land-clearing debris.
- MSW disposal and recycling tonnages would likely be underestimated for those CT towns or cities if their MSW and/or recyclables were delivered directly to an out-of-state destination or directly to an end market without first going through a CT permitted SW facility. If disposal tonnages are under reported, the MSW recycling rate for that town would be over-estimated since the percent recycled = tons recycled/(tons recycled + tons disposed).
- The accuracy of the data present below is contingent upon the accuracy of the data submitted to the DEEP by the reporting entities identified above.
- **PPY**= pounds/person/year
- Combined = (Recyclables Reported as Residential) + (Recyclables Reported as Non-Residential) + (Recyclables Reported as Mixed Residential and Non-Residential)
- Percent MSW Recycled = (Tons MSW Recycled)/ (Tons MSW Recycled + Tons MSW Disposed)
- •Percent Combined of Total MSW Recycled = (Tons of specific material recycled)/(Total tons all items recycled)

Please note <u>data qualifiers</u> at the end of this document.

To find data for a specific municipality – type the municipality name in the search box in toolbar at the top of the screen

MUNICIPAL SOLID WASTE (MSW) RECYCLING DATA FOR CONNECTICUT CITIES & TOWNS - DETAILED REPORT

(Based on Annual Municipal Recycling Report Submitted by the Municipality and Reports from CT Recycling Facilities, Resource Recovery Facilities, Land Fills and Transfer Stations)
PREPARED BY DEEP WEED RECYCLING DIVISION

FY2010 (07/01/2009 - 06/30/2010) Report Prepared on Friday, August 24, 2012

MSW Recycled

Combined tons PPY

% Combined of Total MSW

HomeComposting/
% Combined of GrassCyling Estimate

Region Town Name ANDOVER

Item # Description

Residential tons PPY

Non-Resid tons

PPY tons

Recycled

MSW Generated tons PPY

As of 8/24/2012 the town of Andover is in violation of recycling reporting requirements pursuant to CGS Sec 22a-220(h)

Receiving SW recycling facilities failed to provide accurate data re the tonnage of residential bottles, cans, and paper received from within the borders of the Town of Ansonia in FY2010. The town and DEEP are making efforts to find out the cause and potential solution for the inaccurate and/or incomplete reporting.

^{**} Denotes Non-MSW - not included in the column calculations for "% Combined of Total MSW Recycled".

This municipality had an extremely high MSW disposal rate (>1900 pounds/person/year). This may be due to data issues; however in many cases, these higher disposal rates can be attributed to demographics i.e. large number of businesses, manufacturers, universities, casinos etc.; influx of summer residents; specific industry generating large amounts of waste, etc..

This municipality had an extremely high MSW disposal rate (>1900 pounds/person/year). This may be due to data issues; however in many cases, these higher disposal rates can be attributed to demographics i.e. large number of businesses, manufacturers, universities, casinos etc.; influx of summer residents; specific industry generating large amounts of waste, etc..

These two towns have extremely low MSW disposal rates (<500 pounds/person/year). Data regarding the amount of MSW disposed for Hampton and Scotland may not be completely captured in reports submitted to DEEP.

Hampton and Scotland MSW tonnages are combined

** Denotes Non-MSW - not included in the column calculations for "% Combined of Total MSW Recycled".

MUNICIPAL SOLID WASTE (MSW) RECYCLING DATA FOR CONNECTICUT CITIES & TOWNS – DETAILED REPORT (Based on Annual Municipal Recycling Report Submitted by the Municipality and Reports from CT Recycling Facilities, Resource Recovery Facilities, Land Fills and Transfer Stations) PREPARED BY DEEP WEED RECYCLING DIVISION

This municipality had an extremely high MSW disposal rate (>1900 pounds/person/year). This may be due to data issues; however in many cases, these higher disposal rates can be attributed to demographics i.e. large number of businesses, manufacturers, universities, casinos etc.; influx of summer residents; specific industry generating large amounts of waste, etc..

This municipality had an extremely high MSW disposal rate (>1900 pounds/person/year). This may be due to data issues; however in many cases, these higher disposal rates can be attributed to demographics i.e. large number of businesses, manufacturers, universities, casinos etc.; influx of summer residents; specific industry generating large amounts of waste, etc..

This municipality had an extremely high MSW disposal rate (>1900 pounds/person/year). This may be due to data issues; however in many cases, these higher disposal rates can be attributed to demographics i.e. large number of businesses, manufacturers, universities, casinos etc.; influx of summer residents; specific industry generating large amounts of waste, etc..

This municipality had an extremely high MSW disposal rate (>1900 pounds/person/year). This may be due to data issues; however in many cases, these higher disposal rates can be attributed to demographics i.e. large number of businesses, manufacturers, universities, casinos etc.; influx of summer residents; specific industry generating large amounts of waste, etc..

This town has extremely low MSW disposal rate (<500 pounds/person/year). Data regarding the amount of MSW disposed for that town may not be completely captured in reports submitted to DEEP.

^{**} Denotes Non-MSW - not included in the column calculations for "% Combined of Total MSW Recycled".

QUALIFIERS FOR DATA USED TO CALCULATE MSW RECYCLED & DISPOSED

Recycling Data Qualifiers:

- ♦ FY2010 MSW recycling stats for each municipality are based on (1) Information reported by CT permitted solid waste recycling facilities and transfer stations in reports submitted to DEEP for FY2010 (tonnages of bottles, cans, and paper received from each CT municipality) and (2) the FY2010 Annual Municipal Recycling Reports submitted to DEEP (for tonnages of other material recycled by each municipality).
- ♦ Types of recyclables not included in the data presented above:
 - We have found that even though they submit recycling reports to DEEP, many municipalities do not report the tonnage of all the materials generated within their town and recycled because those figures are often difficult to obtain.
 - Figures for tonnages of material recycled are not complete for many non-residential recyclables such as recyclables backhauled by national retail chains to out-of-state distribution centers for recycling.
 - •Tonnages generally do not include glass, metal, and plastic recycled through the CT bottle deposit law infrastructure.
 - •Tonnages do not include: most of the commercially recycled scrap metal, automobile scrap metal, waste oil recycled by businesses or garages, or storage batteries which are recycled through the storage battery deposit infrastructure.
- ◆The tonnage of leaves recorded as being recycled (composted) at municipal sites is usually estimated on the basis of cubic yards. The reliability of the conversion factor may be affected by the moisture content of the leaves.
- ♦ An attempt is made to estimate tonnages of yard and food waste home composted and tonnages of grass "grasscycled" based on municipal demographics and descriptions of municipal programs to promote home composting and grasscycling.
- ♦ Tonnage of landclearing and demolition material reported recycled (by the annual municipal recycling reports) is presented in the column "Other Waste Recycled" and is not included in the MSW stats.
- ♦ Tonnages of MSW reported as "recycled" from each municipality reflect the amount of MSW recyclables reported collected for recycling from within the borders of that municipality, and not the amount actually used to make products. Contamination, out-throws, residue, etc may be disposed at both at the recycling processing facility and at the mill or manufacturing facility using the material to make a product. That residue is not subtracted from the tonnages reported recycled by each municipality.

When calculating statewide MSW recycling stats, recycling tonnages are based on the amount of bottles, cans, and paper marketed by the recycling processing facilities (not the amount collected or reported received by those processing facilities).

In the future, in order to achieve greater transparency about the tonnage of recyclable material actually used to make a product, an attempt will be made to adjust town-by-town recycling stats to account for the quality of the material collected and the quality of the processing system used to prepare the recyclables to market specifications. This anticipated change in the paradigm for reporting recycling stats is contingent upon the availability of more comprehensive and accurate data re the quality of the material received by end users such as manufacturers and mills.

MSW Disposal Data Qualifiers

- ♦ FY2010 MSW disposal stats for each municipality are based on data submitted to DEEP by CT permitted solid waste facilities and by CT municipalities; their accuracy is contingent upon the accuracy of reporting by both the reporting SW facility and the haulers delivering the MSW to the facilities.
- ◆ Data regarding MSW hauled directly out-of-state for disposal (without passing through a CT permitted SW facility) is generally not reported to DEEP. As a result of such data gaps, disposal rates for some towns may be higher and their recycling percentages lower than reported above. However, starting in FY2011, some of those data gaps will be filled as haulers start complying with new reporting requirements (pursuant to CGS Sec. 22a-220a(j)).
- ♦ Tonnages of MSW disposed do not always include the tonnage of oversized- MSW (furniture, carpets, etc.) which is sometimes reported to DEEP as "bulky waste" or "construction and demolition" waste (C&D waste) instead of being reported as MSW.
- ♦ MSW disposal figures represent combined residential and non-residential disposal tonnages.

In the future, it is anticipated that DEEP will require MSW disposal tonnages to be identified and reported as either residential or non-residential in order to better track the effectiveness and success of strategies and programs that address reduction of residential waste vs non-residential waste.

Comparing Town Recycling Rates

Please keep in mind that it is somewhat misleading to judge the success of a municipality's recycling program by arbitrarily comparing one town's recycling rate to that of another town:

- 1) Recycling potential varies from municipality to municipality and can be affected by the town's demographics
 - For example historically towns with higher per capita incomes tended to generate more newspapers and magazines which contributed to higher potential recycling rates (this might change as news media changes).
 - Recycling in multi-family dwellings can present greater challenges—but can be successful with the implementation of effective recycling strategies.
 - The number and type of businesses, institutions, etc. in a municipality will affect the municipality's MSW stats e.g. the per capita MSW disposal rate, generation rate, and recycling rate.
- 2) Obtaining accurate MSW disposal and recycling tonnages by town of origin is challenging. The city or town of origin of MSW disposed or recycled as reported by Connecticut SW facilities in the reports they submit to DEEP is not always accurate or complete. Accuracy of such data is contingent upon accurate reporting by both the hauler and the solid waste facility.
 - Since the recycling percentage for a city or town is based on both the MSW disposal rate and the MSW recycling rate, inaccurate municipal MSW disposal rates and/or recycling rates will result in inaccurate municipal recycling percentages.

The above qualifiers need to be considered when trying to compare one town's recycling percentage or rate to that of another town.
